Iduapriem Mine Hosts Security and Technical Committee Meetings to Strengthen Industry Collaboration

A group photo of participants at the Security Committee meeting

On Wednesday, 18 March and Thursday, 19 March 2026, AngloGold Ashanti Iduapriem Mine hosted the Security and Technical Committee meetings of the Ghana Chamber of Mines, bringing together industry professionals and security leads to discuss key technical, operational, environmental, sustainability, and security priorities across the mining sector.

The engagements provided a valuable platform for knowledge sharing, strengthened collaboration among member companies, and aligned participants on best practices to enhance operational efficiency, responsible mining, and proactive risk management across the industry.

Speaking at the technical meeting, the Managing Director of Iduapriem Mine highlighted the critical role of technical expertise in driving safe, efficient, and sustainable mining operations, particularly in an increasingly complex operating environment. He encouraged participants to deepen collaboration and knowledge sharing, noting that the exchange of innovations and best practices is essential to improving performance, strengthening safety, and enhancing the global competitiveness of Ghana's mining industry. At the Security Committee meeting, he underscored the growing security challenges facing the industry, including illegal mining and mineral theft, and emphasised that safeguarding operations require strong partnerships among mining companies, regulators, security agencies, and host communities.

Managing Director, Daniel Boadi delivering a welcome address

Participants listening attentively to MD's welcome address

He called on stakeholders to focus on actionable solutions, strengthen coordination, and enhance intelligence sharing to build a safer and more secure operating environment.

Hosting both committee meetings reinforces Iduapriem Mine's commitment to industry leadership, safety, and sustainable development, in line with its purpose of mining to empower people and advance societies.
